Affinity chromatography is a very useful technique for "polishing", or completing the protein purification process. Beads in the chromatography column are cross-linked to ligands that bind specifically to the target protein. The protein is then removed from the column by rinsing with a solution containing free ligands.

The four methods of protein purification are: (1) Extraction (2) Precipitation and Differential Solubilisation (3) Ultracentrifugation and (4) Chromatographic Methods. The methods used in protein purification, can roughly be divided into analytical and preparative methods. The distinction is not exact, but the deciding factor is the amount of protein, that can practically be purified with that method.

3: Methods of Protein Purification and Characterization. A successful protein purification procedure can be nothing short of amazing. Whether you are starting off with a recombinant protein which is produced in *E. coli*, or trying to isolate a protein from some mammalian tissue, you are typically starting with gram quantities of a complex mixture of protein, nucleic acids, polysaccharide, etc. from which you may have to extract milligram (or microgram!) quantities of desired protein at high ...

Basic Methods In Protein Purification The solution conditions of a protein at each step of the purification scheme are essential in maintaining protein stability and function. Proteins should be kept in a well-buffered environment to prevent sudden changes in pH that could irreversibly affect their folding, solubility, and function.

In bulk protein purification, a common first step to isolate proteins is precipitation with ammonium sulfate $(\text{NH}_4)_2\text{SO}_4$. This is performed by adding increasing amounts of ammonium sulfate and collecting the different fractions of precipitated protein.

Subsequently, ammonium sulfate can be removed using dialysis.

Protein purification - Wikipedia

The basic principles of protein still apply; liquid handling robotics / automated platforms are simply used to enable to streamline and accelerate the purification process. Membrane proteins Some 20 - 30% of the proteins produced by cells are integral membrane proteins, and some 50% of small molecule drugs act on membrane proteins [52].
