Methods of Enzymatic Analysis, Volume 4 reviews developments in the use of enzymes as tools in analytical biochemistry, including advances in assay techniques. It discusses the principles and methods for the elucidation of structures of enzymes, such as peptides, proteins, amino acids, fatty acid metabolites, lipids, steroids, nucleic acids, purines, pyrimidines, nucleosides, and coenzymes. It also considers the isolation and characterization of active centers in enzymes. This volume is divided into four parts, each discussing a group of enzymes and their determination. Part I focuses on proteins, peptides, and amino acids including amines and amides. Part II is concerned with fatty acid metabolites, lipids, and steroids ranging from polyunsaturated fatty acids and lecithin to choline, acetylcholine, triglycerides, glycerol, acetoacetate, triacetate, fumarylacetoacetate, 20-ketosteroids, prostaglandins, bile acids, and cholesterol. Part III discusses nucleic acids, purines, pyrimidines, nucleosides, coenzymes, and related compounds, whereas Part IV looks at other substrates and effectors such as inorganic phosphate. The book concludes with a chapter on metabolites and their concentrations in animal tissues. In the past 15-20 years major discoveries have been concluded on potato biology and biotechnology. Important new tools have been developed in the area of molecular genetics, and our understanding of potato physiology has been revolutionized due to amenability of the potato to genetic transformation. This technology has impacted our understanding of the molecular basis of plant-pathogen interaction and has also opened new opportunities for the use of the potato in a variety of non-food biotechnological purposes. This book covers the potato world market as it expands further into the new millennium. Authors stress the overriding need for stable yields to eliminate human hunger and poverty, while considering solutions to enhance global production and distribution. It comprehensively describes genetics and genetic resources, plant growth and development, response to the environment, tuber quality, pests and diseases, biotechnology and crop management. Potato Biology is the most valuable reference available for all professionals involved in the potato industry, plant biologists and

agronomists.
