James Anderson critically reinterprets the history of southern black education from Reconstruction to the Great Depression. By placing black schooling within a political, cultural, and economic context, he offers fresh insights into black commitment to education, the peculiar significance of Tuskegee Institute, and the conflicting goals of various philanthropic groups, among other matters. Initially, ex-slaves attempted to create an educational system that would

support and extend their emancipation, but their children were pushed into a system of industrial education that presupposed black political and economic subordination. This conception of education and social order--supported by northern industrial philanthropists, some black educators, and most southern school officials--conflicted with the aspirations of ex-slaves and their descendants, resulting at the turn of the century in a bitter national debate over the purposes of black education. Because blacks lacked economic and political power, white elites were able to control the structure and

content of black elementary, secondary, normal, and college education during the first third of the twentieth century. Nonetheless, blacks persisted in their struggle to develop an educational system in accordance with their own needs and desires.

Activists, pundits, politicians, and the press frequently proclaim today's digitally mediated racial justice activism the new civil rights movement. As Charlton D. McIlwain shows in this book, the story of racial justice movement organizing online is much longer and varied than most people know.

In fact, it spans nearly five decades and involves a varied group of engineers, entrepreneurs, hobbyists, journalists, and activists. But this is a history that is virtually unknown even in our current age of Google, Facebook, Twitter, and Black Lives Matter. Beginning with the simultaneous rise of civil rights and computer revolutions in the 1960s, McIlwain, for the first time, chronicles the long relationship between African Americans, computing technology, and the Internet. In turn, he argues that the forgotten figures who worked to make black politics central to the Internet's birth and

evolution paved the way for today's explosion of racial justice activism. From the 1960s to present, the book examines how computing technology has been used to neutralize the threat that black people pose to the existing racial order, but also how black people seized these new computing tools to build community, wealth, and wage a war for racial justice. Through archival sources and the voices of many of those who lived and made this history, Black Software centralizes African Americans' role in the Internet's creation and evolution, illuminating both the limits and possibilities for using digital

Living in a segregated society, white Americans learn about African Americans not through personal relationships but through the images the media show them. *The Black Image in the White Mind* offers the most comprehensive look at the intricate racial patterns in the mass media and how they shape the ambivalent attitudes of Whites toward Blacks. Using the media, and especially television, as barometers of race relations, Robert Entman and Andrew Rojecki explore but

then go beyond the treatment of African Americans on network and local news to incisively uncover the messages sent about race by the entertainment industry—from prime-time dramas and sitcoms to commercials and Hollywood movies. While the authors find very little in the media that intentionally promotes racism, they find even less that advances racial harmony. They reveal instead a subtle pattern of images that, while making room for Blacks, implies a racial hierarchy with Whites on top and promotes a sense of difference and conflict. Commercials, for example, feature plenty of Black characters.

But unlike Whites, they rarely speak to or touch one another. In prime time, the few Blacks who escape sitcom buffoonery rarely enjoy informal, friendly contact with White colleagues—perhaps reinforcing social distance in real life. Entman and Rojecki interweave such astute observations with candid interviews of White Americans that make clear how these images of racial difference insinuate themselves into Whites' thinking. Despite its disturbing readings of television and film, the book's cogent analyses and proposed policy guidelines offer hope that America's powerful mediated racial

separation can be successfully bridged.

"Entman and Rojecki look at how television news focuses on black poverty and crime out of proportion to the material reality of black lives, how black 'experts' are only interviewed for 'black-themed' issues and how 'black politics' are distorted in the news, and conclude that, while there are more images of African-Americans on television now than there were years ago, these images often don't reflect a commitment to 'racial comity' or community-building between the races. Thoroughly researched and convincingly argued."—Publishers Weekly "Drawing on their

four black girls by the Ku Klux Klan in the Sixteenth Street Baptist Church bombing in Birmingham. Such events are integral parts of history that continue to inform America's racial politics. Their exclusion is a problem that this work addresses by bringing more visibility to documentary films focusing on the events. Books treating the history of documentary films follow a similar pattern, omitting the efforts of filmmakers who have continued to focus on African American history. This book works to make documentary discourse more complete, bringing attention to films that cover the African American

Many of the earliest Africans to arrive in the Americas came to Central America with Spanish colonists in the sixteenth and seventeenth centuries, and people of African descent constituted the majority of nonindigenous populations in the region long

thereafter. Yet in the development of national identities and historical consciousness, Central American nations have often countenanced widespread practices of social, political, and regional exclusion of blacks. The postcolonial development of mestizo or mixed-race ideologies of national identity have systematically downplayed African ancestry and social and political involvement in favor of Spanish and Indian heritage and contributions. In addition, a powerful sense of place and belonging has led many peoples of African descent in Central America to identify themselves as something

other than African American, reinforcing the tendency of local and foreign scholars to see Central America as peripheral to the African diaspora in the Americas. The essays in this collection begin to recover the forgotten and downplayed histories of blacks in Central America, demonstrating the centrality of African Americans to the region's history from the earliest colonial times to the present. They reveal how modern nationalist attempts to define mixed-race majorities as "Indo-Hispanic," or as anything but African American, clash with the historical record of the first region of the Americas in which
