The purpose of this Flight Examiners ' Handbook (FEH) is to provide all single-pilot aeroplane and helicopter examiners (FE, IRE, FIE, CRE(A), TRE(H), SFE(H)) with a convenient and current reference to the conduct of their examining tasks. The 2020 edition of the handbook details the requirements for examining for EASA Part-FCL licences, ratings and certificates. National licences, ratings ...

A vital resource for pilots, instructors, and students, from the most trusted source of aeronautic information.

An updated resource for instrument flight instructors, pilots, and students.

The official FAA guide to aircraft weight and balance.

"Multi-engine flying opens up new opportunities to utilize an airplane for personal or professional transportation, allowing you to cruise faster, carry more passengers or cargo, and in most cases, fly higher and in greater comfort. With this enhanced capability comes an increased complexity in the aircraft systems, their operations and performance, and pilot decision-making. The Pilot's Manual: Multi-Engine Flying covers the differences between these aircraft and their single-engine counterparts, providing detailed instruction on systems, aerodynamics, and performance. With reference to the most widely flown light twin training aircraft, as well as cabin-class, pressurized multi-engine aircraft that operate Part 135 and Part 91, the authors cover everything needed for pilots to earn a multi-engine rating using real-world scenarios and examples. Each chapter details the objectives and key terms involved, with descriptions of the systems supported with full color illustrations, an overview of how the pilot interacts with the systems during aircraft operations, and possible emergencies specific to those systems. Review questions conclude the chapters to deepen understanding and apply the material. Tying together systems knowledge, checklist protocol, and aeronautical decision making as taught in this book, a multi-engine pilot can be confident of achieving mastery of the aircraft"--Provided by publisher.

Designed for ground instructors, flight instructors, and aviation maintenance instructors, the Aviation Instructor's Handbook was developed by the Flight Standards Service, Airman Testing Standards Branch, in cooperation with aviation educators and industry to help beginning instructors understand and apply the fundamentals of instruction. This handbook provides aviation instructors with up-to-date information on learning and teaching, and how to relate this information to the task of teaching aeronautical knowledge and skills to students. Experienced aviation instructors will also find the updated information useful for improving their effectiveness in training activities. While this handbook primarily uses the traditional term "student" to denote someone who is seeking certification in aviation, the accepted term in educational psychology is "learners."
