There's a lot of conversation about how to make schools better. Unfortunately, the nature of those conversations often makes things worse. *Evocative Coaching: Transforming Schools One Conversation at a Time* maps out a way to change that. By taking a teacher-centered, no-fault, strengths-based approach to performance

Stories are basic to life. Everybody loves a
good story. We have been reading,
listening to, or watching stories all of our

lives, so we intuitively know a lot about how they work. Yet, more and more, Christians are unfamiliar with the stories of the Bible and how the grand narrative of God's Word fits together. Indeed, God gave us the stories of the Bible to reveal great truth about Himself and about our lives, and He wants to draw us into the

An overview of recent efforts in the machine learning community to deal with

dataset and covariate shift, which occurs when test and training inputs and outputs have different distributions. Dataset shift is a common problem in predictive modeling that occurs when the joint distribution of inputs and outputs differs between training and test stages. Covariate shift, a particular case of dataset shift,

Where To Download Plantronics M50 User Guide

occurs when only the input distribution changes. Dataset shift is present in most practical applications, for reasons ranging from the bias introduced by experimental design to the irreproducibility of the testing conditions at training time. (An example is -email spam filtering, which may fail to recognize spam that differs in

form from the spam the automatic filter has been built on.) Despite this, and despite the attention given to the apparently similar problems of semi-supervised learning and active learning, dataset shift has received relatively little attention in the machine learning community until recently. This volume

The chapters offer a mathematical and philosophical introduction to the problem, place dataset shift in relationship to transfer learning, transduction, local learning, active learning, and semi-supervised learning, provide theoretical

or impossible to preclude or stop." As a human quality, it is something that we associate with people such as sports superstars, those who do whatever it takes to inspire others and lead teams to the greatest of victories. Sometimes, an idea or person can become unstoppable. Unstoppable, like Charles Lindbergh
