~~cobalt-60 | Uses, Half-Life, &
Facts | Britannica~~

Half-life is the expected value when half the number of atoms have decayed. Carbon-14 has a half-life of 5730 years. Taking one atom of C-14, this will either have decayed after 5730 years, or it will not. But if this experiment is repeated again and again, it will be seen that the atom decays within the half life 50% of the time.

~~Half-life (element) Facts for Kids |
KidzSearch.com~~

The half-life of an isotope is the time on average that it takes for half of the atoms in a sample to decay. For example, the half-life

Acces PDF The Half Life Of Facts Why Everything We

of carbon-14 is 5730 years. This means that if you have a sample of carbon-14 with 1,000 atoms, 500 of these atoms are expected to decay over the course of 5730 years.
