Research Overview. Professor Gao's primary research interest is in the development of novel bioelectronic devices for personalized and precision medicine: wearable and flexible biosensors that can analyze the various biomarkers in body fluids for real-time continuous health monitoring and early diagnosis, and synthetic micro/nanomachines for rapid drug delivery and precision surgery.

Caltech Department of Applied Physics and Materials Science is home to academic and research programs in Applied Physics and in Materials Science. Research in Applied Physics is built on the foundations of quantum mechanics, statistical physics, electromagnetic theory, mechanics, and advanced mathematics. Materials Science research uses these same tools of physics and mathematics and adds to ...

The Gao Research Group at the California Institute of Technology is a highly interdisciplinary research team devoted to developing versatile bioelectronic devices for fundamental and applied biomedical studies. Our research thrusts include fundamental materials and chemistry innovations as well as important device and system level applications toward personalized and precision medicine.
